Q U A T E R N I U M

EVONDIL QUATERNIUM PERM

4 Formulations allow to act in a specific way, over each type of hair, providing volume, shine and treatment to the hair, without interfering in its natural properties.

EVONDIL NEUTRALIZER 1+1

Curl setting and neutralizing agent.

VITAMIN RECHARGE OH LA LA

- Maximum Fiber Protection
- Apply it with every technical "process before & after"
- Mix it with bleaching and hair colour
- Multiple possibilities

Protection, Softness, Silkness, Shine

Formula free of sulphates, parabens, silicones, allergens, no synthetic dye, alcohol, phthalates, polycyclic musk

VOLUME & TREATMENT

EVONDIL QUATERNIUM is a new intelligent permanent wave system with a specific action on each type of hair, giving it volume and care without affecting the natural hair properties.

The new formulation introduces natural components such as α -Keratine, Quaternium and Wheat Proteins, that have the maximum affinity to the structure of the hair fibers. These polymers take greater care and protect the hair, while giving strength and power to the curl.

The α - **KERATINE** polymer is specially rich in cistine and acts with the maximum affinity to the hair fiber structure.

Therefore, it can penetrate into the hair fiber and deposit cistine in those areas that are harmed during the perming process, allowing for an easier recovery of the original hair fiber structure.

During the neutralizing stage, the cistic bridges are recomposed to form weaker unions that, with the help of α -Keratine's cistine, recover their original strength and power.

α -KERATINE AFFINITY TO HUMAN HAIR

The **QUATERNIUM** polymer strengthens the form and the curl by placing a thin protecting layer that helps maintain the curl shape longer, while conditioning the hair and making it easier to comb.

The **WHEAT PROTEINS** contribute to even the hair structure, and at the same time they provide flexibility, elasticity and sheen. **WHEAT PROTEINS** have a triple effect on the hair: **Nutrition, Protection and Moisturization.**

1. SELECT THE CORRECT TREATMENT

After a careful diagnosis of the hair and scalp, select the most suitable variant of **EVONDIL QUATERNIUM** for the type of hair to be treated.

- 0 = Strong Hair
- 1 = Natural Hair without any chemical or bleach treatments
- 2 = Dyed or Bleached Hair
- 3 = Very Sensitive or Highlighted Hair

2. PREPARATION

- Before application, wash the hair with a gentle neutral EVA shampoo. Do not rub the scalp. If the hair to be curled is natural and has solid structure, the use of a slightly alkaline shampoo is recommended.

- Rinse well with water and eliminate any excess moisture with a towel.

Attention: Extremely dry, porous, or damaged hair, or highlighted hair should be first treated by applying **VITAMIN RECHARGE OHLALA** after washing while still wet. Apply a certain amount of gel directly to the more damaged areas. Use a comb to spread the gel evenly and begin to curl the hair without rinsing.

3. CURLING AND APPLICATION OF THE BASE LOTION

- Wear suitable protective gloves during the entire application.

- Curl the hair according to the selected method of the application (direct or indirect).

The liquid is foamy so that all types of techniques can be used.

- Once curling has been completed, saturate the hair to ensure uniform application of the product.

- If the lotion comes into contact with the skin, clean immediately with a cotton pad soaked in water.

- The correct amount of lotion depends on the length, volume and porosity of the hair.

The usual recommendations are:

- up to 70 ml. for short hair
- up to 125 ml. for long hair (approx. 20cm).

- Do not protect the edges of the hair during application nor during the exposure time (cotton, etc.)

- The process can be accelerated by covering the head with a special cap for permanent waves.

4. EXPOSURE TIMES

Recommendations

| Variety of Evondil | With heat and covered | Without heat and covered |
|--------------------|-----------------------|--------------------------|
| 0 | 10 - 15 min. | 15 - 20 min. |
| 1 | 10 - 15 min. | 15 - 20 min. |
| 2 | 5 - 10 min. | 10 - 15 min. |
| 3 | 5 min. | 5 - 10 min. |

These exposure times are approximate values only and may vary according to the structure of the hair. The final exposure should be determined by testing with several hair curlers.

5. NEUTRALIZATION

- When the exposure time has elapsed, rinse all the hair-curlers with hot water for 2 - 3 minutes.

- Dry any excess moisture with a towel.

- Without unrolling the hair - curlers, carefully neutralize the hair with the neutralizing liquid previously diluted in equal parts of hot water.

- Use a sponge to apply the product saturated in foam. Begin at the nape of the neck.

- Allow for approximately 5-10 minutes to act.

- Unroll the hair - curlers without pulling the hair, and apply a second neutralization, make sure the hair is wet around the nape of the neck and the contour, as well as the tips.

- Allow another 5 - 10 minutes for the neutralizing liquid to act.

Important: the recommended exposure time for the neutralization is always the minimum.

6. TO END THE TREATMENT

Rinse the hair carefully with copious hot water.
